11. Table configuration / field definitions

The screenshot shows the ServiceNow interface for configuring a table named 'Incident Workflow'. The browser address bar shows the URL: `dev352209.service-now.com/now/nav/ui/classic/params/target/sys_db_object.do%3Fsys_id%3D23a7eaff976f83103664fc90f053af98%26sysparm_record_target%3Dsys...`. The ServiceNow header includes the logo, navigation tabs (All, Favorites, History, Admin), and a search bar. The table configuration section includes fields for Label (Incident Workflow), Name (u_incident_workflow), Application (Global), and Remote Table. Below this, there are tabs for Columns, Controls, and Application Access. The 'Columns' tab is active, showing a table of dictionary entries. The table has columns for Column label, Type, Reference, Max length, Default value, and Display. The entries are Resolution Notes, Impact, Comments, and Work Notes, all of type String. The 'Max length' column is highlighted in blue.

A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)
