

Define the Problem Statements

Ideation Phase

Date	2 oct 2026
Team ID	SWTID-2026-5846
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Purpose

The customer problem statement activity expresses the problem from the perspective of the people affected by the current IT helpdesk process. Two perspectives are considered: the student/teacher who raises a support request and the IT helpdesk staff member who processes and classifies the request.

PS-1: Student / Teacher Perspective

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student or teacher who needs IT support	Report an IT issue and get help quickly	My issue needs to be reviewed and categorized by IT staff	The helpdesk requires staff to identify the appropriate category and subcategory for incoming requests	Frustrated because additional processing may be required before the request is correctly classified and routed

PS-2: IT Helpdesk Staff Perspective

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-2	An IT helpdesk staff member	Process and route support tickets efficiently	I have to manually inspect and categorize incoming tickets	Different requests require different categories and subcategories and the classification is not automatic	Overloaded when many support requests arrive and manual classification is required

Consolidated Problem Statement

The school IT helpdesk needs a way to reduce the manual effort involved in identifying the type of incoming support request. Students and teachers need a simple way to submit their issue, while IT staff need tickets to be categorized consistently so that requests can be processed efficiently.

Problem Definition Outcome

The problem statements establish the need for an automated classification mechanism that can interpret the issue description, assign the appropriate Category and Subcategory, and support timely communication with the caller.
