

Data Flow Diagram & User Stories

Auto Ticket Classification using Flow Designer

Date	2 oct 2026
Team ID	SWTID-2026-5846
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

1. Data Flow Diagram

The data flow describes how an IT support request moves through the solution. A student or teacher enters the request, the ticket is stored in the Incident WorkFlow custom table, and Flow Designer evaluates the short description. The resulting Category and Subcategory are written back to the ticket. After classification, an email notification is sent to the caller.

Level-0 Data Flow - Auto Ticket Classification

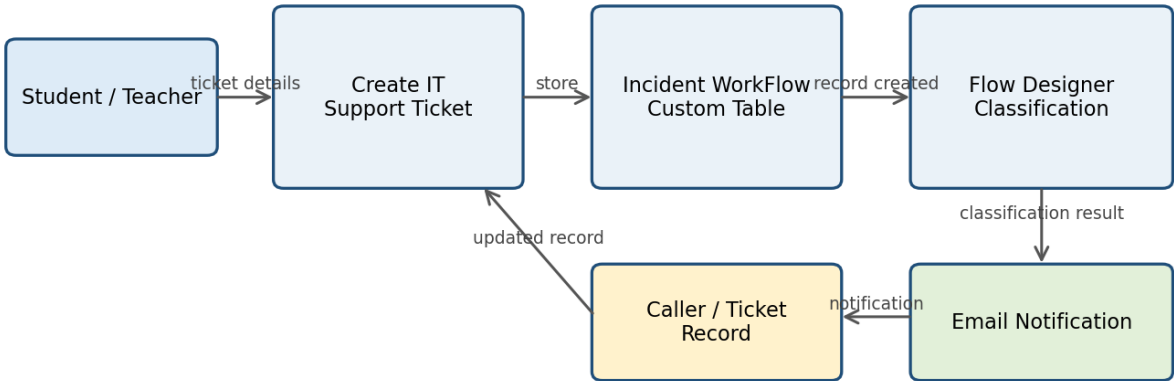

Figure 1. Level-0 data flow for the proposed solution.

2. Data Flow Description

Step	Process	Data / Result
1	Ticket creation	Caller and issue description are entered.
2	Record storage	The ticket is stored in the Incident WorkFlow custom table.
3	Flow trigger	A Record Created trigger starts the classification flow.
4	Keyword evaluation	The short description is checked against predefined issue keywords.

5	Classification	Category and Subcategory are assigned according to the matching rule.
6	Notification	A confirmation email is sent to the caller.

3. User Stories

The following stories are written from the perspective of the users who interact with the school IT helpdesk process. The release column is used as a simple implementation grouping for this project.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Student / Teacher	Ticket Creation	USN-1	As a student or teacher, I can create an IT support ticket by entering my caller details and issue description.	A ticket record is created and receives a unique ticket number.	High	Release-1
Student / Teacher	Ticket Creation	USN-2	As a student or teacher, I can describe my IT problem using a short description.	The short description is saved with the ticket.	High	Release-1
Student / Teacher	Ticket Classification	USN-3	As a student or teacher, I can submit a ticket without manually selecting the final Category and Subcategory.	The flow classifies the ticket after creation.	High	Release-1
IT Helpdesk Staff	Automatic Classification	USN-4	As an IT helpdesk staff member, I can have Wi-Fi issues classified as Network / Wi-Fi.	A matching Wi-Fi ticket contains Category = Network and Subcategory = Wi-Fi.	High	Release-1
IT Helpdesk Staff	Automatic Classification	USN-5	As an IT helpdesk staff member, I can have projector issues classified as Hardware / Projector.	A matching projector ticket contains Category = Hardware and Subcategory = Projector.	High	Release-1
IT Helpdesk Staff	Automatic Classification	USN-6	As an IT helpdesk staff member, I can have password or login issues classified as Access / Forgot Password.	A matching password/login ticket receives the expected classification.	High	Release-1
IT Helpdesk Staff	Automatic	USN-7	As an IT	A matching	High	Release-1

	Classification		helpdesk staff member, I can have slow or hanging computer issues classified as Performance / Slow Computer.	ticket receives the expected classification.		
Student / Teacher	Notification	USN-8	As a caller, I receive an email confirmation after my ticket is processed.	A confirmation email is generated for the caller.	Medium	Release-1
IT Helpdesk Staff	Data Consistency	USN-9	As an IT helpdesk staff member, I can use dependent Category and Subcategory choices.	Only valid Subcategory choices are available for the selected Category.	Medium	Release-1
Administrator	Maintenance	USN-10	As an administrator, I can maintain the classification flow and ticket configuration.	The solution can be updated through ServiceNow configuration without changing application code.	Medium	Release-1

4. User Story Coverage

Together, the stories cover the main user journey: create a ticket, classify the issue, maintain valid category relationships, notify the caller, and maintain the configuration.

Reference to Project Requirement

The project specification requires automatic classification, dependent Category/Subcategory choices, structured ticket storage, and automated caller email notification.
